

Re-Rounding clamps for Pipe of Sizes 63 to 180 MM.

Overview :

- These tools have been designed to reround pipe (Especially a coiled pipe that becomes elliptical after uncoiling), before Electrofusion process
- They work with pipes between 63 to 180 mm diameter
- Different diameter shells can be fitted to ring to allow the exact diameter of pipe to be re-rounded
- The tool is completely adjustable and easy to handle

Specifications :

- Shells are available in the following sizes:
63, 90, 110, 125, 160, 180
- The clamp is made from aluminium, nylon and zinc plated steel
- Size 32 cm x 29 cm x 11 cm (2 way standard kit)
- Weight 1.3 kg
- These tools are designed to comply with British Gas GISPL2-5:2006 specifications

Features :

- Each shell can re-round the pipe when clamped into it. The shells are made from hard nylon, giving excellent strength whilst being lightweight. They easily clip together giving fast operation
- The holding ring can be mounted on the alignment clamp to act as a multi alignment and re-rounding clamp
- This can be used with the liner shells to cover the complete range of sizes
- The clamp handles are fitted with a 19mm hexagonal top to allow a spanner to be fitted for extra tightening force
- The clamp can be lowered onto a pipe positioned in a narrow trench
